Umbrella Assembly and Care Instructions

- 1) Lay the umbrella box flat on the ground, carefully remove the top half just like you would a pizza box (open three sides). DO NOT slide the umbrella out of the carton as the staples could scratch or mar the finish.
- 2) Find the installation hardware included in the pole box. Place the umbrella pole through the tabletop center hole. Since there are various designs of tables from many vendors there is a hole drilled in the lower end of the pole to help with the securing of the umbrella. If you are using the 6' pole insert the bolt, 2" x 5/16" (with a washer on each side of the pole) and lightly tighten the nut onto the bolt just underneath the tabletop. When using the 8' length pole that will go to the ground, the bolt is used in the lower drilled hole and will keep the umbrella secured. For either pole you will need to tighten the attached nut just enough to keep the bolt in place. Do not over-tighten. The bolts are provided for safety and security reasons.
- 3) Lift up one edge of the umbrella so that the umbrella is resting on its side on the cardboard and move it to the table where the pole is installed.
- 4) The underside of umbrella has a pole stub that should be placed into the pole you secured into the table. Align the holes in the stub and pole. Insert the bolt, 2" x 5/16" (with a washer on each side of the pole) and lightly tighten the nut onto the bolt. The bolt is there to keep the umbrella from detaching from the pole; it does NOT need to be fully tightened. The nut just needs to be securely on the bolt. Use hand tools and not power tools.

Warning: Use of a table/umbrella combination without the lower bolt, is UNSAFE. Wind may dislodge the umbrella, causing property damage or personal injury. Tables should be secured/anchored to ensure added safety and security. STM accepts no liability due to improper installation.

CARE AND MAINTENANCE

Your umbrella will last many years. To ensure that your umbrella's finish lasts, wash and wax as you would a car. Do not use abrasive pads or scouring cleansers. Dish or car wash soap will work well. A high-quality car wax will enhance the life and luster of the finish.
